## MATERIALS SCIENCE COLLOQUIUM

**SPEAKER:** Dr. Peter Fischer  
Lawrence Berkeley National Lab

**TITLE:**  $^3$ Magnetic soft X-ray microscopy: Imaging towards fundamental magnetic length and time scales<sup>2</sup>

**DATE:** Thursday, November 15, 2007

**TIME:** 11:00 a.m.

**PLACE:** Building 212, Room A-157

**HOST:** Axel Hoffmann

Refreshments will be available at 10:45 a.m.

### Abstract:

The challenge to modern magnetic microscopies is provide both spatial resolution in the nanometer regime, a time resolution on a ps to fs scale and elemental specificity which allows to study novel multicomponent and multifunctional magnetic nanostructures and their ultrafast spin dynamics which is of both fundamental and technological interest.

Magnetic soft X-ray microscopy combines X-ray magnetic circular dichroism (X-MCD) as element specific magnetic contrast mechanism with high spatial and temporal resolution. Fresnel zone plates used as X-ray optical elements provide a spatial resolution down to currently <15nm [1] which approaches fundamental magnetic length scales such as the grain size [2] and magnetic exchange lengths. Images can be recorded in external magnetic fields giving access to study magnetization reversal phenomena on the nanoscale. Utilizing the inherent time structure of current synchrotron sources fast magnetization dynamics with 70ps time resolution, imited by the lengths of the electron bunches, can be performed with a stroboscopic pump-probe scheme [3].

I will present recent achievements of magnetic soft X-ray microscopy obtained with the full-field soft X-ray microscope XM-1 at the ALS. Selected examples on magnetic multilayers and nanostructured systems where both classical Oersted fields as well as spin torque phenomena are used to manipulate the magnetisation [4]. Future perspectives of magnetic soft X-ray microscopy aiming for <10nm spatial and fs time resolution will be discussed

This work is supported by the DOE, Office of Science, Basic Energy Sciences,

Division of Materials Sciences and Engineering..
